

Territory Growth

Why we're Pivoting

Growth has gotten harder despite heavy investment — the data shows why, and what to do about it.

- **Deals got bigger, wins got harder** — ASP is up nearly 4x since FY20, but win rates have fallen materially at the same time.
- **Buying fundamentally changed** — Decisions now need executive, financial, and procurement alignment — not just IT sign-off.
- **One motion, three markets** — SMB, Enterprise, and Public Sector now buy in genuinely different ways from one another.
- **So territories must change** — Clearer lines, smarter account groupings, and specialization by segment — built around opportunity.

What's changing at a glance

Four shifts you'll see in FY27 — all aimed at helping you sell more, not less.

Cleaner data

— 34K duplicate accounts removed, plus a larger, enriched prospect pool to pursue.

Smarter account groupings

— AI-built clusters around real decision-making units.

A three-segment model

— LE, SLED, and SMB — each aligned to how that market actually buys.

Clearer territory lines

— Territories drawn around opportunity, with rules that protect your active deals.

“Hey Frank, What about my existing opps?”

What you all want to know...

Existing Accounts with Open Opps & FACs

Because we are making significant strategic adjustments, we're applying two consistent hold rules to protect continuity on open opportunities and FACs during the transition.

1. Accounts transitioning to other Acquire reps

Reps keep all accounts with an FAC in the last 2 years, so recent effort isn't lost when territories are redrawn around you. Opps must move to QO by January to retain ownership for the full fiscal, if not, then they move February 1, 2027

2. Accounts transitioning out of Acquire OR into Acquire*

- ✓ *Opportunity stage is at 'Proposal' or beyond*
- ✓ *CPQ has been sent to the contact*
- ✓ *Meaningful talk time and outreach within the previous 60 days*

→ Held with the current owner until October 1st.

*** Exception — Micro NA & LATAM:** All Sales Reps (all divisions) has 6 months to move open opportunities to QO or the accounts will move. This allows reps to focus on their new territory — which has a higher propensity to close.

The data behind the change

What we looked at — and what it told us.

What we did:

We looked at several aspects of Acquire to better understand why growth has become increasingly difficult despite significant investments in events, BDRs, AI, product evolution, and go-to-market changes.

What We Looked At

- FY26 sales equation
- Historical performance trends
- Win-rates
- Account size economics
- Industry performance
- Buyer attention dynamics

What We Observed

- ASP increased nearly 4x
- Win rates declined materially
- Attention is becoming more expensive
- Enterprise opportunities create the most value
- Industry performance varies significantly

Questions We Started Asking

- Why are larger opportunities harder to win?
- Has the buying process fundamentally changed?
- Does expertise matter more than it did five years ago?
- Are different markets rewarding different forms of expertise?

It comes down to one equation

$$\text{Revenue} = \text{FACs} \times \text{Win Rate} \times \text{ASP}$$

FACs

The meetings you generate.

Win Rate

How many of them convert to revenue.

ASP

The average size of each deal.

The redesign is about improving all three — sharper targeting, deeper expertise, and cleaner coverage.

A look at the ACQ sales equation over the last 6 years

Revenue growth over the last 5 years has been driven by ASP expansion, offsetting material decline in win rate.

Revenue = FACs × Win Rate × ASP

FAC productivity dipped in 2022–23, but has since **rebounded to a record high**

Win rate has **more than halved** from its peak, creating a need for more pipeline

ASP has **increased 3.8x**, more than offsetting declines in conversion efficiency

Why a drop in win Rate? Buying complexity has increased materially over the past five years

Decision-making has expanded beyond IT and increasingly requires executive, financial, and procurement alignment.

THEN (FY20)

CIO-led buying

Technology decision makers led the process

Smaller deals

Lower ACV and fewer stakeholders

Simpler procurement

Light process with limited requirements

Relationship-driven selling

Trust and relationships drove decisions

INCREASING
COMPLEXITY

- More stakeholders
- Higher scrutiny
- Greater risk aversion
- More rigorous process
- Stronger business case requirements

NOW (FY26)

CFO / CEO / Board influence

Executive leadership drives investment decisions

Larger deals

Higher ASP with more complexity and risk

Formal procurement

RFPs, security, legal, and compliance requirements

Business-case driven buying

ROI, risk, and business outcomes required to justify spend

IMPLICATION

The expertise required to win opportunities has increased significantly.

The buying environment has evolved. Our sales motion and expertise must evolve with it.

Not All Opportunities Are Equal

Yet we treat them as such by throwing them all in a bin, churn them through our GTM engine, and hope we get a good consistent results.

The Territory Plan

What are we doing for F27

Aligning expertise to buying motions can provide more growth

Different markets increasingly require different forms of expertise to improve conversion, executive access, and opp quality.

1 THREE MARKETS, THREE MOTIONS			
	 SMB	 ENTERPRISE	 PUBLIC SECTOR
 Primary Buyer	Manager / Director	CIO / CFO / Executive Team	Agency Leadership
 Buying Motion	Faster	Complex	Procurement-Driven
 Key Differentiator	Responsiveness	Expertise	Procurement Fluency
 Coverage Model	Geographic	Industry-Aligned	Dedicated SLED
 KEY INSIGHT: Different buying environments increasingly require different expertise, language, and stakeholder engagement.			

3 WHY SPECIALIZATION IS DIFFERENT THAN TRAINING	
TRAINING (Important but Limited)	SPECIALIZATION (Compounding Advantage)
 Teaches concepts	Builds pattern recognition
 Calendarized	Daily
 One size fits all	Context-specific
 Slower accumulation	Faster accumulation
 Knowledge transfer	Real-world repetition
 KEY INSIGHT: Specialization accelerates the development of expertise in a way training alone cannot.	

WHAT THE DATA SUGGESTS

**We are pushing**

- More activity
- More meetings
- More coverage breadth

And need to add

-  Better expertise
-  Better executive access
-  Better opportunity selection
-  Better conversion

EXPECTED OUTCOMES

**COMMERCIAL IMPACT**

- Higher close rates
- More \$100K+ opportunities
- Improved executive engagement
- Better industry credibility

**ORGANIZATIONAL IMPACT**

- Faster rep ramp
- More consistent discovery
- Better qualification quality
- Stronger forecast accuracy

**STRATEGIC IMPACT**

- Greater alignment to how customers buy
- More defensible competitive positioning
- Improved long-term scalability

RECOMMENDATION

SMB:
GEOGRAPHIC

ENTERPRISE:
INDUSTRY-ALIGNED

PUBLIC SECTOR:
DEDICATED SLED

Not because the organization needs a new structure, but because the buying environment increasingly rewards expertise.

Territory Design principles

Simple rules that guide every territory decision.

- **Territories, not people** — We drew lines around opportunity first, then assigned them to reps.
- **Clean, clear lines** — No overlaps and no ambiguity about who owns what.
- **Built around three segments** — LE, SLED, and SMB — each matched to how that market actually buys.
- **Grouped by real decision-makers** — Accounts clustered around how buying happens, not just legal ownership.
- **AI Powered Data** — Account groupings, account segments, industries mapping and even contacts are cleaner.

F27 Go Forward Plan: same sales process, different grind, different focus

Small/Medium, Large/Enterprise, and Public Sector each require a distinct approach to suit the new sales environment.

	Small / Medium	Large / Enterprise	Public Sector (SLED)
Organization Design	Commercial Orgs \$50-500M rev	Commercial Org \$500M+ rev	State & Local Gov + Education
Typical Stakeholders	1-6	3-12+	Multiple, incl. procurement & finance
Sales Cycle	1-6 months	3-12+ months	6-18+ months (budget-cycle dependent)
GTM Alignment	By Geography	By Industry	By Government Segment (State/Local/Education)
Procurement & Funding	Standard PO process, discretionary budget	Legal/security review, capital budget	Formal RFP/contract vehicles, fiscal-year appropriated funding
Focus Area	Meeting generation & qualification	Stakeholder identification & group buying	Stakeholder identification & procurement navigation

70 Territories split between Three Major Markets: SMB, LE, SLED

Effects of A Structured Territory Model

Consistent territory and resources coverage increases focus and improves win rates

01

Business Continuity

Backup resources already in place to cover for resource gaps

Performance benchmarking becomes meaningful

Forecasting becomes more predictable

Resource management improves

Scalable and predictable

02

Team Development

Appropriate sale motion design

Efficacy benchmarking

Training focus (SE vs LE)

Drives high value engagement

03

Time in Territory

Play the long game

Account ownership in perpetuity, no fear of losing opportunities

Relationship building becomes a focus

Community building becomes a strength

04

Focus Industry/Geo

Alignment with internal SME's becomes a point of leverage

Messaging and sales motion get aligned

Familiarity and consistency build brand

Buying and procurement cycles align

Eliminate account ownership disputes

Cleaner data is here

Significant improvements to our data quality in FY26 mean cleaner more strategic territories in FY27.

34K Fewer Duplicate Accounts

— Cleaned from 50K down to 16K. Less wasted outreach, stronger data integrity, and more time selling.

Larger Prospect Pool

— Thousands of new viable Commercial and Public Sector prospects added across North America and globally to improve our reps pursuit of new opportunities.

New and Enriched Account Data

— New SFDC fields for Director/VP/C-Level counts, plus enriched data for revenue, employee count, population, LinkedIn, and website data.

The review period

Your window to flag genuine issues before territories lock.

- **What it's for** — Correcting real data or assignment issues — not reassigning by preference.
- **How it works** — Submit through your Director and VP using the standard template.
- **The deadline** — August 19, 2026, target getting feedback to your director by August 14.
- **After it closes** — Territories lock for the year; later changes need executive sign-off.

Key dates: from proposed territory to go-live

Your roadmap for the next three weeks. Two things to watch: your feedback deadline, and when deals move to your new director.

APPENDIX

USE FOR INDIVIDUAL SEGMENT SESSIONS

FAQs

Quick answers to the questions we hear most.

Why did my account move?

Usually to meet grouping, GL, or territory-design rules — and it was a prospect, not a member.

What if I spot a real issue?

Flag it with your Director and VP during the review period using the standard template.

When do reporting lines change?

Reporting lines change Aug 24 when territories go live. Deals roll to your new director Sept 1; before that they track to your current director.

When will I know my quota?

Direction comes at SKO and Shark Week kick-off. Quotas are likely communicated in September; we're working to get them to you ASAP, faster than in past years.

How long do I keep my FACs?

24 months of FACs you generated stays with you; you have until January to move the opps to QO. If they move to QO you keep them for F27; if not, they move Jan 1, 2027.

When and where do I see my territory?

The dashboard is live Aug 13 — your official view of your proposed territory and every account moving in or out.

Two reps have an FAC on the same account. Who keeps it?

The most recent qualified FAC wins — the account goes to the rep with the latest FAC.

What about parent / child or SMB accounts inside an LE territory?

Accounts are grouped around the real decision-making unit. An SMB-sized account that is part of a larger enterprise buying group stays with the LE territory that owns that group.

AI Powered Account Groupings

Dunn & Bradstreet Ultimate Parents over grouped accounts together based on legal relationships. As a result, we had massive account groups we attempted to assign to a single rep. Rep conflicts decreased, but hundreds of buying centers went buried and unworked in territories.

Using **Clay/AI** we can now subdivide groups into pragmatic sales-territory units. In F27, a group is a cluster of entities that share a real decision-maker, brand, leadership, and P&L, with one procurement process, sized so one rep can own and work it.

[Ultimate Parent] | [Operating Group] | [Region]

Ultimate Parent	Operating Group	# Viable Accounts
Berkshire Hathaway Inc.	Marmon Holdings (Diversified Industrial)	13
	Precision Castparts (Aerospace Components)	10
	HomeServices of America (Real Estate Brokerage and Services)	8
	Berkshire Hathaway Primary Insurance Group	6
	TTI, Inc. (Electronic Components Distribution)	5
	Berkshire Hathaway Automotive (Dealerships)	5
	Fruit of the Loom and Apparel/Footwear	5
	Lubrizol (Specialty Chemicals)	5
	Berkshire Jewelry Group (Manufacturing, Retail and Supply)	4
	Berkshire Aviation Services (NetJets and FlightSafety)	4
	Berkshire Hathaway Specialty Insurance	4

Potential Account Movement and Why

Accounts may have moved to achieve account grouping requirements, GL alignment and/or territory design principles.

Why an account may have moved

- 1 Consulting/MSP account groups may have moved to the Partner Team — this is by design! Eg. accounts in NAICS 5415/5416
- 2 Accounts once thought unrelated that now prove related, are grouped together for a more accurate picture of the business.
- 3 FY26 account groups that now show they no longer belong together were split for better account assignment.
- 4 Inside Engage is retaining all member accounts and member related prospects. Pure prospects will transition to either field or Acquire.
- 5 EU accounts held in North America moved to the EU team for stronger geo alignment and improved account management.
- 6 Acquire prospect accounts realigned to the new design: geo for SMB, industry for Large/Enterprise.

Territory feedback: triage before escalation

The Territory Team reviews evidence-based exceptions only after Director and VP validation.

PROCESS FLOW

Decision rule:

If the request is not objective, material, and VP-approved, it does not go to the Territory Team.

We are not running an August account fight. We are running a controlled data correction process.

Guardrails

- Professional tone only
- No personal attacks
- Facts over preference
- No unsupported “hail mary” keeps

Escalation is a privilege of evidence, not volume.

What to submit — and what we can’t action yet

The goal is to fix genuine data or assignment issues quickly and fairly — for everyone.

Eligible feedback

- Holdover opportunity was not accurately reflected
- Sector classification is incorrect
- Account size classification is incorrect
- Buying-center grouping is wrong or unnecessary
- Salesforce data issue materially affected assignment

Not Eligible Feedback

- Preference or tenure alone (e.g. “I’ve always owned it”)
- Speculative future deals without supporting evidence
- Accounts below the holdover threshold
- Requests not yet validated with your Director and VP

Required account-level details

Include the account-level facts that back up your request:

Account Name	SFDC link	LinkedIn	Current owner	Future owner	Category	Rationale (3-5 bullets: facts, evidence, business impact)
Default bar: proposal with CPQ	Close-by expectation: October 1	VP-approved exceptions only	Facts and evidence based
